

# City Trader Network FAQ

**In the Network Game screen, if I put more than 17 characters in the Enter your name field, I can no longer click on OK. Is this normal?**

Yes, there is a maximum of 17 characters for your name, which should really be enough. If your name is more than 17 characters long, we are very sorry.

**After finishing a network game, I can't relaunch a network game or a solo game. Is this normal?**

Yes, you have to quit and relaunch to play another game.

**I am connected to internet via modem, and I can't connect to a City Trader network game. Why?**

Check that you have entered the correct IP address for the host player. If you still can't connect, maybe your ISP has a firewall which would not allow you to access a network game, in which case you would have to talk to them.

**When a network game is over, the Pantheon screen is displayed with each player's final score. Why not the high scores of the game?**

The goal in City Trader is to get the best score in a fixed time (three months, six months, a year). Isn't that the mission that Juliette gives you in the solo games? So it's the final result that counts.
